This Plant grows on Barren Grounds.

TIME.

July.

DESCRIPTION.

The Roots 1, are woody, full of Small fibres shooting downward. of a dark brown Colour. The Stalks 2, are dry and firm having a Green skin co ver'd with a sort of white Cotton so thick that it appears of a very white wit Green. The Leaves 3, are long, Narrow, without footstalks and lay almost Close to the Stalks on which they Grow. The Flower Cups 4, are Whiter, but on the Tops inclining to Yellow. The Tuft that stands out on the Larger Heads, is of a bright shining Yellow; at the bottom of each of the Tufts are many Seeds, having a Yellow Floret on the top of each. They are Brown, and of an oval Form 5, and are dispers'd by the Down that grows upon the top of them. 6 one Leaf of the Flower Cup. 7, a Seed with the Down and Floret these two are Magnified.

VIRTUES.

This is thought to be Drying and Binding and usefull in Fluxes and Hæmorrhagies.
